NMR spectra

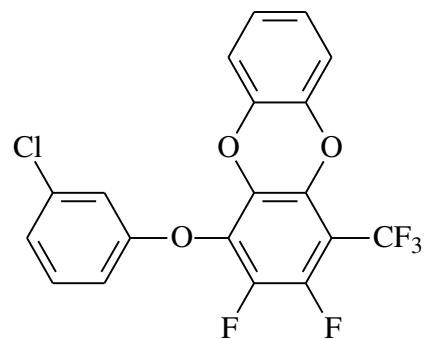

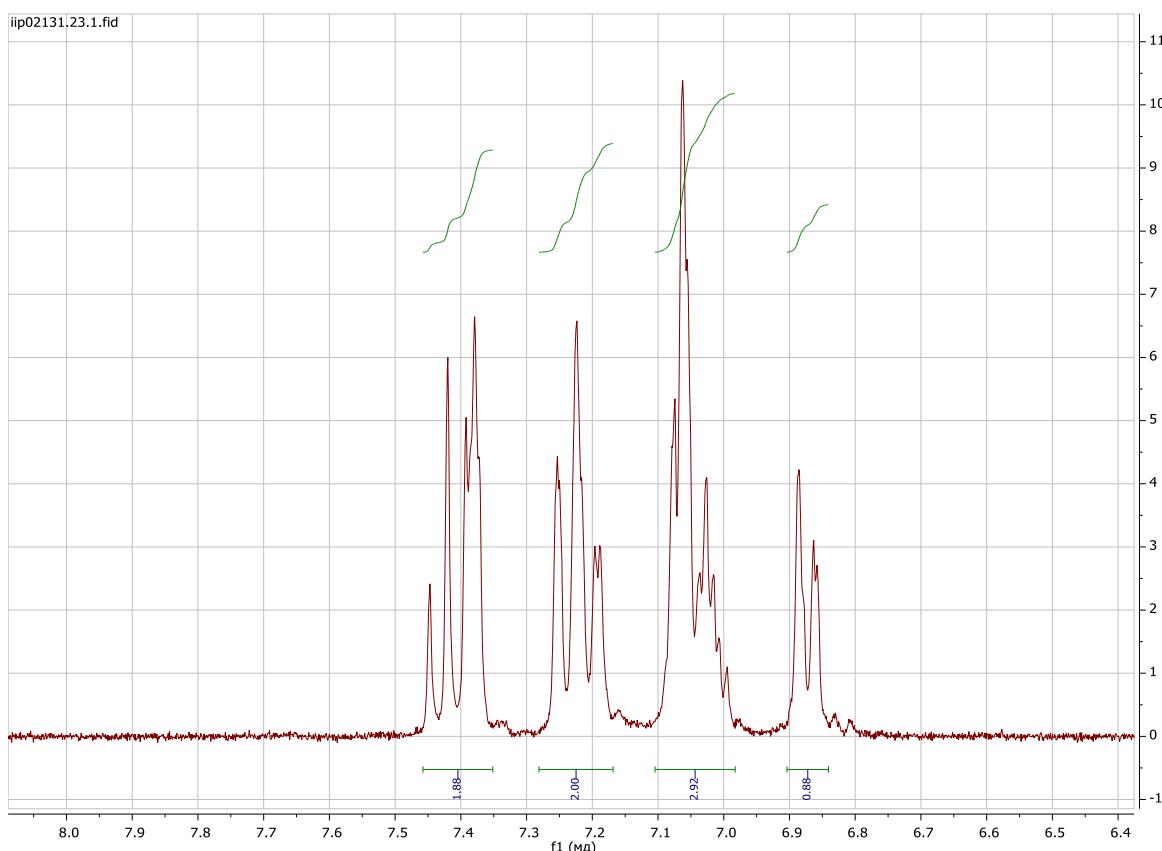

1-(3-Chlorophenoxy)-2,3,5,6-tetrafluoro-4-(trifluoromethyl)benzene

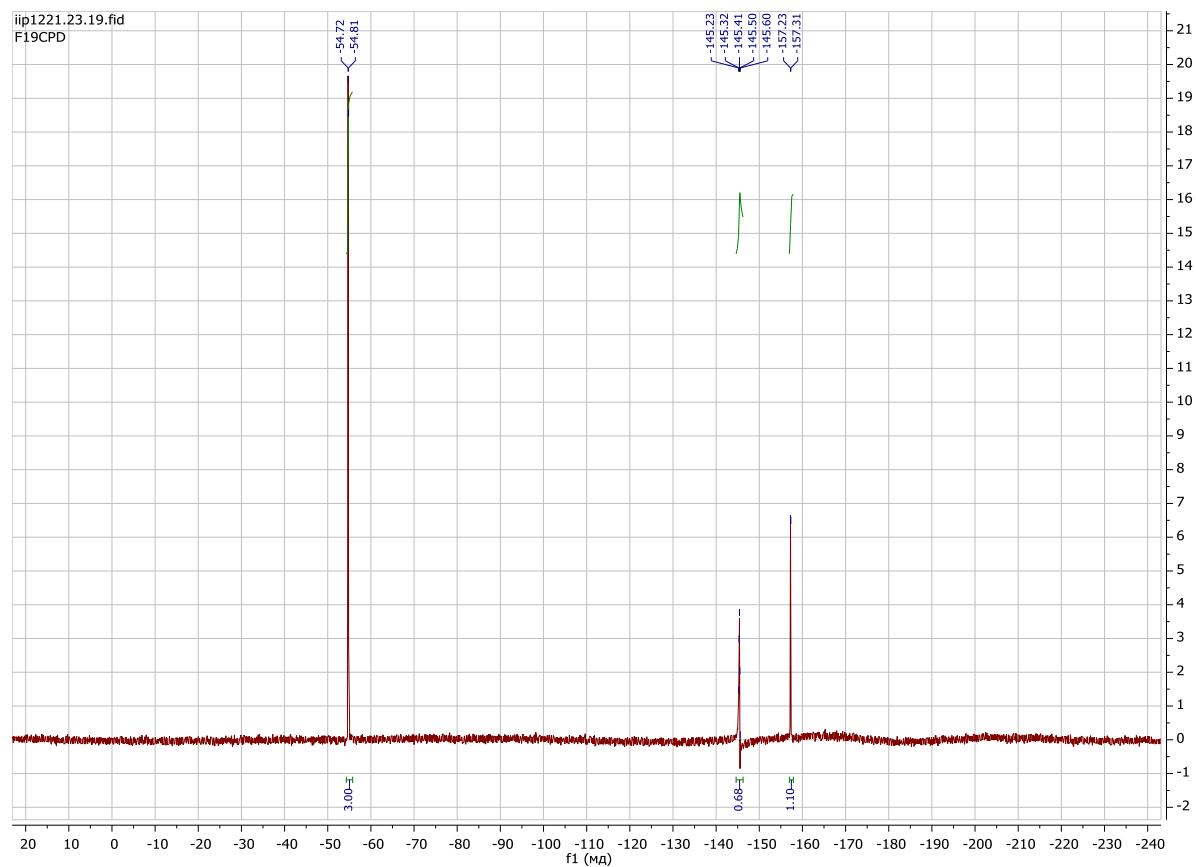

¹H NMR spectrum in DMSO-d₆

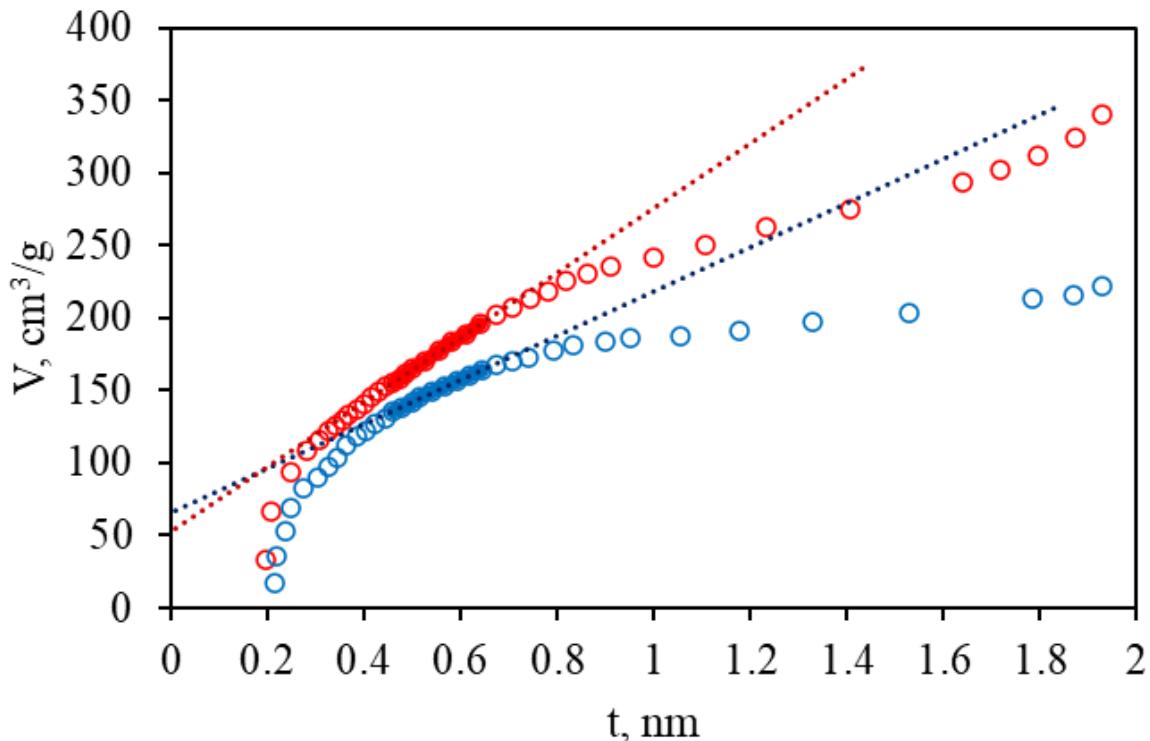

¹⁹F NMR spectrum in DMSO-d₆

1-(3-Chlorophenoxy)-2,3-difluoro-4-(trifluoromethyl)-dibenzo[*b,e*][1,4]dioxin¹H NMR spectrum in DMSO-d₆

¹⁹F NMR spectrum in DMSO-d₆

Full range t-plots

The t-plots at the p/p_0 range of 0–1 for layer thickness (t) up to ~ 2 nm in accordance with the Harkins–Jura (HJ) equation are shown for samples **1** (blue) and **2** (red). The points in the standard t -plot range for layer thickness (t) range of 0.45–0.65 nm (linearized part of the t -plot) is highlighted in both curves. The trendlines are built for the linearized standard t -plot range.

Harkins–Jura (HJ) equation

$$t(nm) = \sqrt{\frac{13.99}{0.034 - \log\left(\frac{p}{p_0}\right)}},$$

where t is the layer thickness; p and p_0 are the equilibrium and saturation pressures of an adsorbate, respectively.
